ABSTRACT

For the seventh consecutive year, the Comprehensive Tests of Basic Skills, Form U (CTBS/U) was used to measure achievement in South Carolina public schools in the following areas: (1) reading; (2) spelling; (3) language; (4) mathematics; (5) reference skills; (6) science; and (7) social studies. Results for grades 4, 5, 7, 9, and 11 are summarized in this report, which includes results for 220,589 students. The CTBS/U was developed in 1981. With respect to the 1981 norms, the achievement levels of the majority of all students in grades 4, 5, and 7 were above the national median in all seven areas. The majority of ninth-grade students scored above the national median in all areas except reading, and more than half the eleventh graders scored above the median in all areas except reading, reference skills, and science. While scores were generally fairly stable with respect to the preceding year, gains were reported for certain grades and skill areas. Overall, significant increases in all areas for all five grades since 1983 present evidence of the educational improvement in South Carolina. Appendices A through E contain 203 pages of test results by grade. Appendix F contains cautions in the interpretation of test results, and Appendix G is a glossary of terms related to the testing program. (SLD)

INTRODUCTION

For the seventh consecutive year, the *Comprehensive Tests of Basic Skills, Form U (CTBS/U)*, was used to measure achievement in the seven areas of Reading, Spelling, Language, Mathematics, Reference Skills, Science, and Social Studies. The results of the assessment in Grades 4, 5, 7, 9, and 11 in South Carolina public schools are summarized in this report.

Ninety–one (91) South Carolina school districts participated in the 1989 Statewide Testing Program at all five grade levels, with Palmetto Unified participating at Grades 9 and 11 only. Tested as part of the 1989 Statewide Testing Program during the third week in March were 220,589 South Carolina 4th, 5th, 7th, 9th, and 11th graders. In the 4th grade, 46,706 students were tested; in the 5th grade, 45,047 students were tested; in the 7th grade, 44,589 students were tested; in the 9th grade, 47,676 students were tested; and in the 11th grade, 36,566 students were tested. Students in Grades 9 and 11 were tested on a statewide basis for the fourth time and students in Grade 5 for the fifth time.

The *CTBS/U* was developed in 1981, and all comparisons to national norms refer to the performance of the norming sample of students who were tested in that year. With respect to the 1981 norms, the achievement levels of the majority of all fourth, fifth and seventh graders were above the national median in all seven areas tested in 1989. The majority of ninth grade students scored above the national median in all areas except Reading, while more than half of all eleventh graders scored above the median in all areas except Reading, Reference Skills, and Science.

Although scores generally have remained fairly stable over the last year, noteworthy gains (of one percentage point or more) were reported for certain grades and skill areas: for Grade 4 in Mathematics and Social Studies; for Grade 5 in Spelling, Mathematics, and Science; for Grade 7 in Reading, Spelling, Language, Mathematics, and Science; for Grade 9 in Spelling, Language, Mathematics, and Science; and for Grade 11 in Spelling and Mathematics. Between 1988 and 1989, substantial gains in Mathematics were reported for all the grades tested in the Statewide Testing Program with similar increases noted for Spelling in all grades except Grade 4. Overall, the significant increases in all areas for all five grades since 1983 presents conclusive evidence of the educational improvement in South Carolina.

For a more specific description of the results of this *CTBS/U* assessment, the performance of each grade for the first year of administration, 1988, and 1989 is shown in a bar graph followed by a brief discussion. In this year's report, changes in scores are not included in the discussion for any skill area unless the "gain" or "loss" is 1 percentage point or greater. All of the graphs depict the percentages of students above the national median (middle score) for South Carolina as compared to those for the national sample which was administered the *CTBS/U* in 1981. By definition, 50% of students in the national norm group scored above the median in each skill area.

Appendices which describe the tested students according to varying parameters are included in this report. Appendices A and B are district tables which list the percentages of students above the 50th national percentile and the median national percentile scores for all tested grades, respectively. Results for Palmetto Unified and Youth Services are reported as separate districts in these appendices. Appendix C is comprised of summary tables which include several types of scores for all students, as well as various subpopulations. One of these summary tables, Table C.3, shows the percentages of students above the 50th national percentile for all the years of CTBS/U administration, including 1984–1987, as appropriate. The two graphs in Appendix D allow comparisons for 1989 across grades of the median percentile scores and percentages of students above the 50th national percentile (the national median). Appendix E contains graphs which show median national percentiles across years for each grade. Appendix F provides cautions which should be observed in the interpretation of test results. Added to this appendix this year are more cautions regarding the comparison of state scores to national norms. Finally, Appendix G provides a glossary of commonly used terms.

[a] These national percentiles are based on the scores of a national norm group who were administered the CTBS/U in 1981.

[b] See Table C.3 for the figures for 1984–1987 for this grade.

Figure 1 shows the performance of Grade 4 students across the seven skill areas. In 1989, the majority of South Carolina's 4th graders scored above the national median (the 50th national percentile) in all skill areas. As in 1988, the highest percentage above the national median occurred in Mathematics (70.0%). On Battery Total, the 4th grade percentage above the national median was 64.3.

The performance of the fourth grade is significantly higher in every skill area in 1989 as compared to 1983. Over the past year, achievement levels in most areas remained relatively stable, although gains were evidenced in two areas. The largest increase between 1988 and 1989 was in Mathematics (1.6 percentage points), while a gain of 1 percentage point was reported in Social Studies.

GRADE 5

[a] These national percentiles are based on the scores of a national norm group who were administered the CTBS/U in 1981.

[b] See Table C.3 for the figures for 1986–1987 for this grade.

The performance of the 5th graders across the seven skill areas is shown in Figure 2. Similar to 1988, in 1989 the majority of South Carolina's 5th graders scored above the national median in all areas, with the highest percentage above the national median occurring in Mathematics (70.6%). The 5th grade Battery Total percentage above the national median was 55.5.

The 1989 scores of South Carolina 5th graders are higher in every skill area than those of 1985. The 5th grade scores remained generally stable over the past year, although gains of more than 1 percentage point did appear in three areas. An increase of 2.8 percentage points was reported for Science, while Mathematics scores rose 2.1 percentage points and Spelling, 1.1 percentage points.

[a] These national percentiles are based on the scores of a national norm group who were administered the CTBS/U in 1981.

[b] See Table C.3 for the figures for 1984–1987 for this grade.

Figure 3 shows that in 1989 more than half of South Carolina's 7th graders once again scored above the national median in all skill areas. The highest percentage above the national median continues to be in Spelling (70.3%). On Battery Total, the 7th grade percentage above the national median was 60.4.

The performance of the state's 7th graders has continually increased in all skill areas since 1983. During the past year, substantial gains were observed in five areas: Mathematics (2.5 percentage points), Science (2.0 percentage points), Language (1.6 percentage points), Reading (1.5 percentage points), and Spelling (1.2 percentage points).

NOTE: Battery Total consists of Reading, Language, and Mathematics.

[a] These national percentiles are based on the scores of a national norm group who were administered the CTBS/U in 1981.

[b] See Table C.3 for the figures for 1987 for this grade.

The *CTBS/U* assessment of South Carolina's 9th graders was reported for the fourth year. As shown in Figure 4, in 1989, the majority of these students continued to score above the national median in all areas except Reading. As in 1988, the highest performance was in Mathematics (61.9%). The Battery Total percentage above the national median was 53.8.

The achievement levels of ninth graders has improved considerably since 1986 when the *CTBS/U* was first administered to these students. Although the performance of 9th graders remained relatively stable in several skill areas between 1988 and 1989, notable gains were reported in four areas. Progress was apparent in Spelling (1.9 percentage points), Mathematics (1.4 percentage points), Science (1.1 percentage points), and Language (1.0 percentage points).

GRADE 11

Figure 5
CTBS/U Percentages Above 50th National Percentile[a]

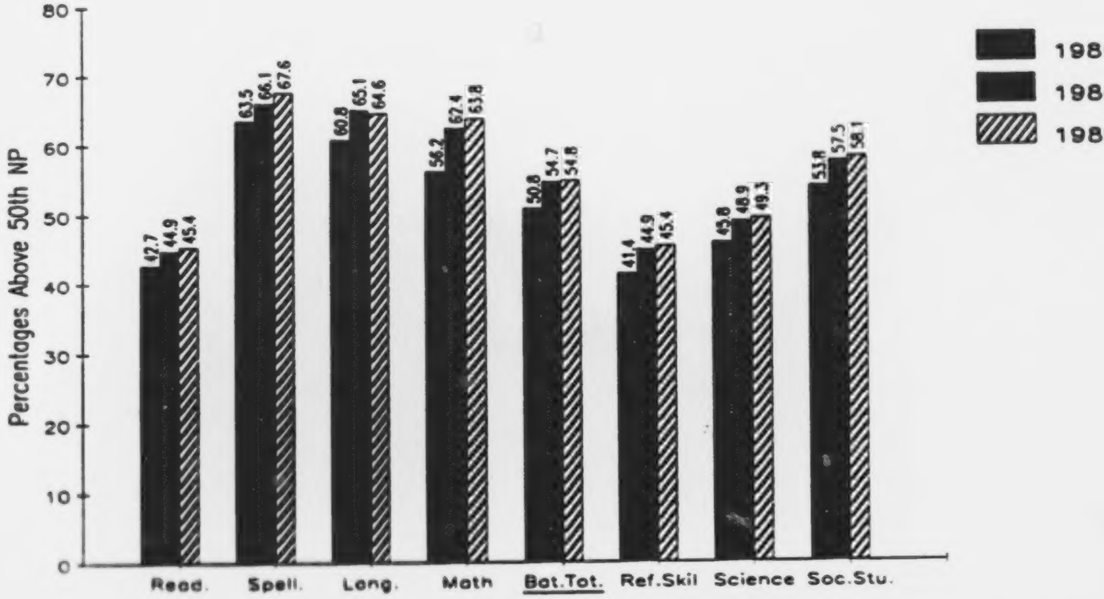
Grade 11



NOTE: Battery Total consists of Reading, Language, and Mathematics.

[a] These national percentiles are based on the scores of a national norm group who were administered the CTBS/U in 1981.

[b] See Table C.3 for the figures for 1987 for this grade.

The assessment of South Carolina's 11th graders was also reported for the fourth time using the *CTBS/U*, and the performance of these students is shown in Figure 5. As in 1988, the majority of the students in Grade 11 scored above the national median in four of the seven areas. The highest performance was once more in Spelling (67.6%), and the Battery Total percentage above the national median was 54.8.

The performance of South Carolina 11th graders has risen in every skill area since 1986. With the exception of two skill areas, the performance of the state's 11th graders remained fairly stable between 1988 and 1989. Gains were observed in Spelling (1.5 percentage points) and Mathematics (1.4 percentage points).

CONCLUDING COMMENTS

For the third consecutive year, the scores of more than half of the students in Grades 4, 5, and 7 were above the national median in all seven skill areas tested by the *CTBS/U*. The majority of the students in Grade 9 also continued to score above the national median in all areas except Reading, while the majority of students in Grade 11 scored above the national median in four of the seven skill areas. Substantial gains in Mathematics were reported across all five grades. In 1989, the greatest gains in achievement were reported for Grade 7 with noteworthy increases in five of the seven skill areas.

The scores on the *CTBS/U* continue to make visible the educational improvement which has taken place in South Carolina over the past seven years.

[a] THE COLUMN HEADING ENTITLED "% FREE LUNCH ELIGIBILITY" IS BASED ON THE NUMBER ELIGIBLE FOR FREE LUNCH DIVIDED BY THE AVERAGE DAILY MEMBERSHIP (GRADES K-12, 45-DAY ADM) AS REPORTED BY THE SCHOOL DISTRICTS TO THE OFFICE OF SCHOOL FOOD SERVICES, OCTOBER, 1986. SCHOOL MEALS MAY NOT BE MADE AVAILABLE TO ALL KINDERGARTEN STUDENTS IN ALL DISTRICTS. STUDENTS IN ALL GRADES MAY BE ELIGIBLE FOR FREE MEALS, BUT MAY CHOOSE NOT TO APPLY OR PARTICIPATE IN THE MEAL PROGRAM. THEREFORE, THE RATE OF ELIGIBLE STUDENTS SHOWN IN THIS TABLE MAY NOT REPRESENT TOTAL ELIGIBLE STUDENTS AND MAY BE SLIGHTLY DISTORTED.

APPENDIX F

Cautions in Interpretation of Test Results

CAUTIONS IN INTERPRETATION OF TEST RESULTS

There are a number of cautions discussed below concerning the interpretation of norm-referenced test results.

Content Validity

Norm-referenced testing is designed to allow educators to compare the performance of a student or a group of students to the performance of a national normative group. Since the test content must be universally applicable, the test questions measure global or national instructional targets rather than more specific local objectives. Therefore, the possibility is strong that the content covered on the test may not be taught at the particular grade level at which it is tested. These possible problems with content-related evidence of validity should be taken into account when interpreting test results.

Factors Related to Achievement Scores

A second caution relates to a frequent misuse of standardized test data, namely, the inclination among users of the data to equate high test scores with the quality of instructional programs. Practitioners must remember that test data constitute a single type of information that must be used in conjunction with other pieces of information to evaluate educational quality. For example, entry characteristics of students such as socioeconomic background and educational level of parents are strongly related to test performance. Therefore, comparisons of scores among schools and/or districts as a means of judging program quality should not be made unless differences in the populations of students are considered as part of the comparison.

Differences in Norm Group and South Carolina

Third, differences between the 1981 norming sample used to develop the *CTBS/U* and the South Carolina student populations should be taken into account. Key socioeconomic indicators, including adult literacy rate and average annual income, are among some of the factors that relate to test achievement. Consequently, achievement test data will be influenced by these factors.

Several factors which may tend to inflate estimations of the performance of students should also be considered in comparing state data to a national norming sample:

1. Age of Norms. Current scores are being compared to those of a national sample tested in 1981. If education has improved nationally in the past eight years, then the current performance of a national sample would likely be higher. If that is the case, the 1989 percentile scores for South Carolina would be inflated (since they were derived from the 1981 norms).

2. Selection of Test. Norm-referenced tests are not randomly selected by their users. They are chosen, in part, because of the match with the current curricula used in a state system. However, the students in such a system might score higher than the norming group.

3. Motivation of Students. Students in "high–stakes" systems such as South Carolina's (in which important decisions are determined by test scores) may be more motivated than the students on whom the test was normed. The norming group typically has only internal motivation to guide achievement.

4. Curriculum Alignment. After the initial administration, norm–referenced tests often function as more than measurement devices; they provide guidance and set standards for future instruction. Educators do, and should, attend to weaknesses in instructional domains suggested by the test. To the degree that the test drives the curriculum, students in succeeding years would be expected to score higher.

5. Familiarity of Items. After administration of the *CTBS/U* for seven consecutive years, familiarity of the test content might affect scores.

Grade Equivalent Scores

A fourth caution concerns the grade equivalent score. The most common abuse of grade equivalents is to equate the score to grade level performance. If a 7th grade student obtains a grade equivalent score of 9.0 in the spring on Level H of the *CTBS/U*, this result means only that the student is substantially above average compared to the 7th graders in the normative group. A frequent misuse of the data would be to label the student as a 9th grade achiever although 9th grade content was not measured. Another problem with the grade equivalent score is that the value of the score fluctuates considerably as a function of the raw score. An increase in one raw score point may result in an increase of as little as 0.1 grade equivalent or as much as 1.6 grade equivalents, depending on the subtest under consideration. This relationship between the raw score and the grade equivalent should be considered in the interpretation of these scores. Therefore, the Department recommends using the percentage above the national median or national percentiles rather than grade equivalents. When comparing gains at different points in the distribution, the Normal Curve Equivalent (NCE) provides the fairest, least distorted information. The NCE provides an equal interval scale and is based on national percentiles.

Comparisons Across Grades

A fifth caution relates to comparing the 1983, 1984, 1985, 1986, 1987, and 1988 test results with those prior to 1983 which used the *CTBS/S*. The results of the 1983, 1984, 1985, 1986, 1987, and 1988 Statewide Testing Programs are not directly comparable with the results from before 1983 because the newer test, has a different norming group and is different in test content. Although conversion tables are available to convert the earlier *CTBS/S* results to *CTBS/U* results, these conversions are approximations only. Therefore, if scores are converted for purposes of comparisons across years, these results should be viewed as estimations of student performance; otherwise, incorrect conclusions could be drawn about the change in student achievement over the years.

Grade Equivalent

A grade equivalent score represents the average performance obtained by a norming sample of students at a given grade level. The scores are calculated by giving the test to be normed to groups of students at the different grade levels which are presumed to be appropriate for the difficulty and subject matter of the test. The average scores of each of these groups are calculated and used for establishing the average level of performance associated with each grade level. The range of scores for each grade level is divided into tenths to indicate the month of a given grade associated with a specific test score. Grade equivalents are usually expressed in decimal form: a grade equivalent score of 3.7 indicates that a student scored at the average score expected to be obtained by students in the seventh month of third grade. Grade equivalent scores can be misinterpreted because they are often interpolated to obtain scores for each month. They are also often extrapolated to provide scores beyond the range of students whose data were actually used to norm the test. Thus, a test intended for third grade students may provide grade equivalent scores indicating that a student scored at the sixth grade level, when in fact the test was not taken by sixth grade students in the process of norming because the material tested is inappropriate for sixth graders.

National Percentile

The national percentile of a score is the percentage of students in the national sample of students used for norming the test who scored below the midpoint of the score. The national percentile of a given score is calculated by adding together all the frequencies of students scoring below the given score, plus one–half the frequency of students scoring at the score, dividing by the total number of students tested, and multiplying the result by 100. National percentiles provide a measure to compare a student's score to the performance of a sample of students thought to be representative of students across the country.

Norm–Referenced Testing

Norm–referenced testing is designed to rank students on achievement from high to low. Student test results are interpreted with respect to group test results.

Normal Curve Equivalent

Normal curve equivalent (NCE) scores are used for evaluating the effectiveness of education programs, especially for those for low–achieving students. They are commonly used for assessing gains in achievement over a school year by subtracting students' average achievement in NCE units at the beginning of the year from their average achievement at the end of the year. If the result is a positive number, it is considered that the students had a larger gain in achievement than is usually expected of students at this level; a negative number indicates that the students did less well than expected. NCE scores are normalized standard scores which are equal–interval, have a mean of 50 and a standard deviation of 21.06, and correspond to the percentile scale at scores of 1, 50, and 99.

Raw Score

The raw score is the number of items on the test that the student answered correctly. All other types of scores used in testing are derived from the raw score.

Scale Score

A scale score is a score which has been derived from a raw score and transformed so it can be placed on a different system of measurement. For example, a raw score can be converted to the percentage scale by dividing the raw score by the total number of items on the test and multiplying the result by 100. Scores from standardized tests are usually transformed from raw score to a different scale.
